# Architecture

Deep Dive into creating  
Android apps

# One Source to rule them all

Win, Mac, iOS, Android

# FireMonkey Framework Architecture

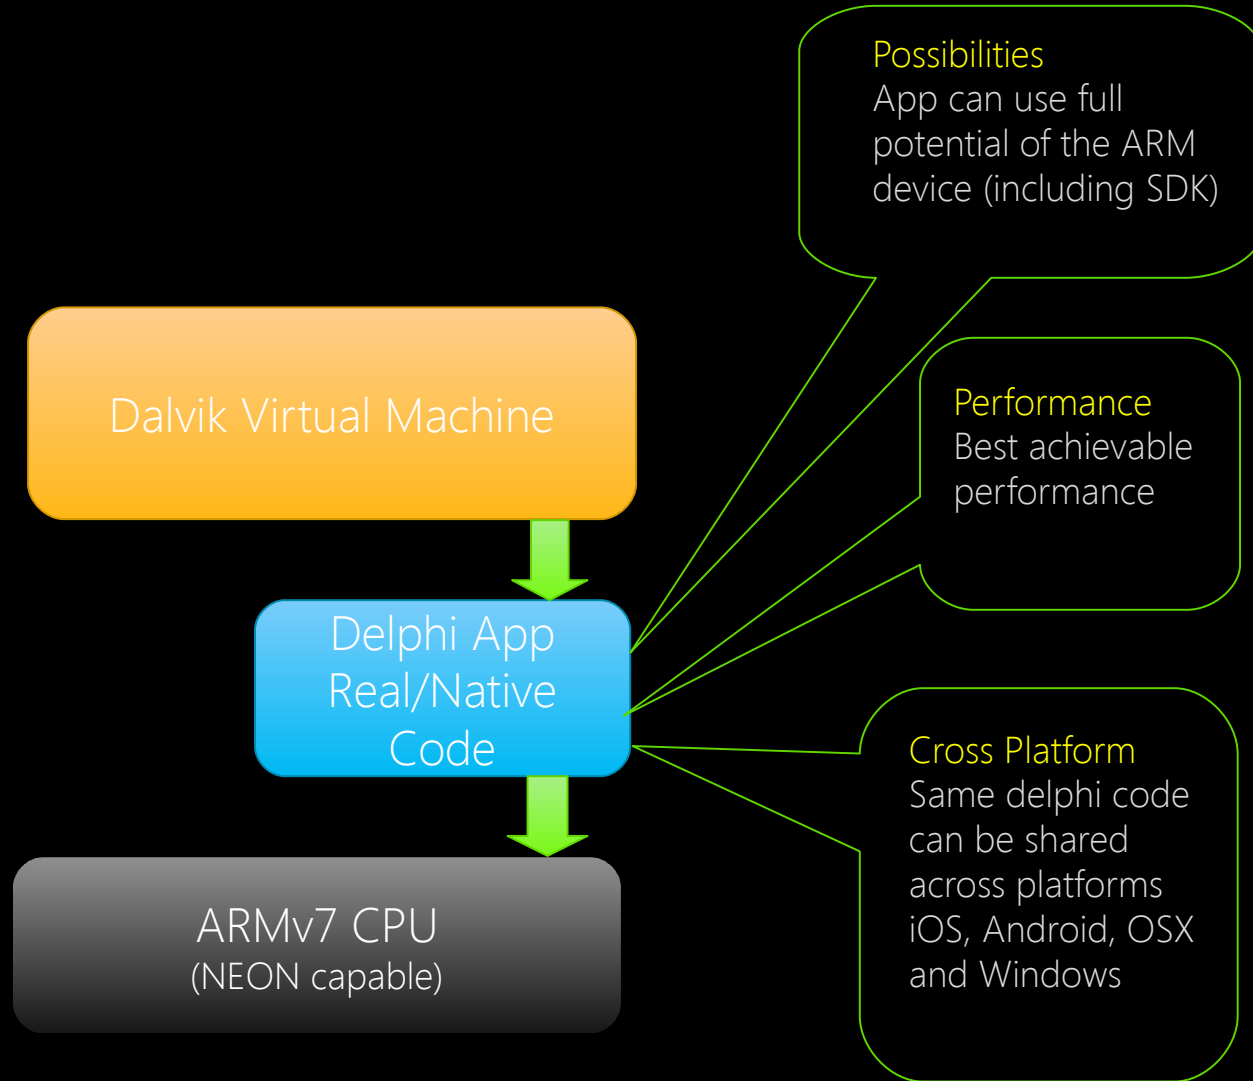

# Mobile Cross Compilation and Packaging

# Android native

Delphi creates compiled binaries of native code that runs directly on the CPU

# Native Controls

Deep Dive into creating  
Android apps

# Native Controls

- Custom Picker
- Date Picker
- Time Picker
- Phone Dialer
- Text Editing for TMemo and TEdit
  - Cut/Copy/Paste/Zoom
- Message alerts
- iOS Keyboards

# Access Android SDK functions

- most of the Android and iOS SDK is easily accessible via RTL and FM
- benefit of using RTL and FM to access SDK
  - it's easy
  - no need to know platform specific SDK
  - same code across multiple platforms
- but you can access low-level SDK

The logo for The Delphi Company features the text "THE DELPHI COMPANY" in a serif font, with a blue swoosh arching over it. Below the main text is the text "-est 1998-".

# Platform

Deep Dive into creating  
Android apps

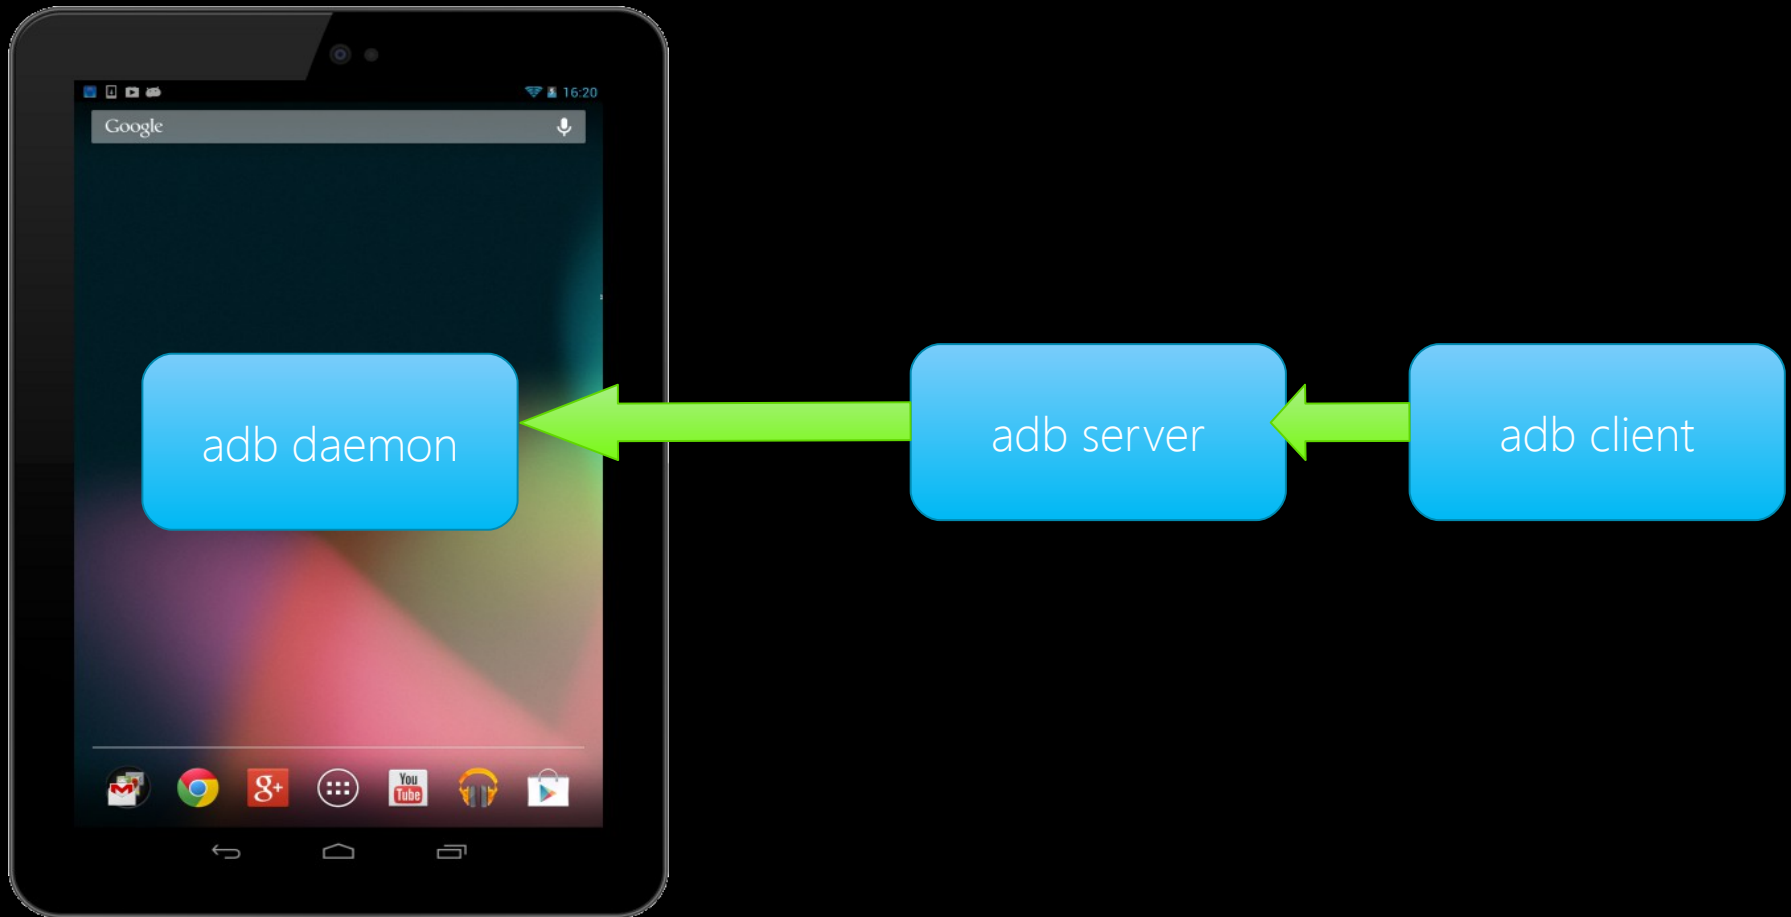

# Running

Each app has one process, each app process has one Dalvik Virtual Machine

# Android Debug Bridge

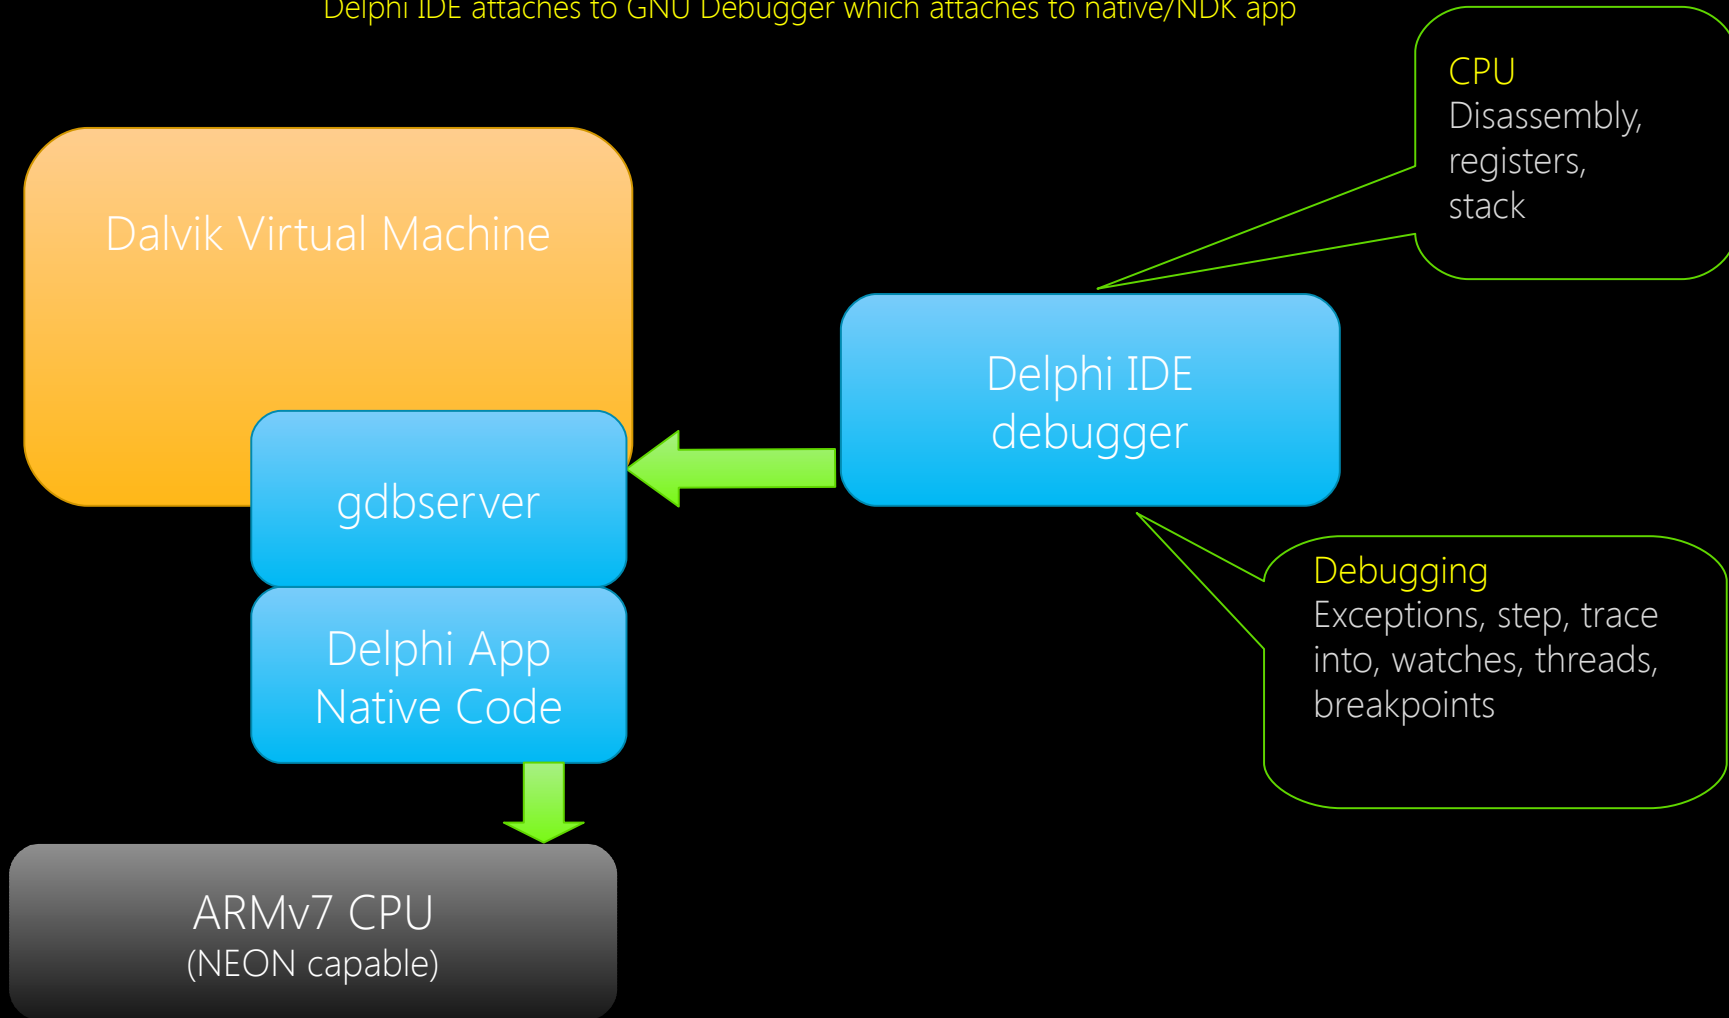

adb server and client run on windows development machine

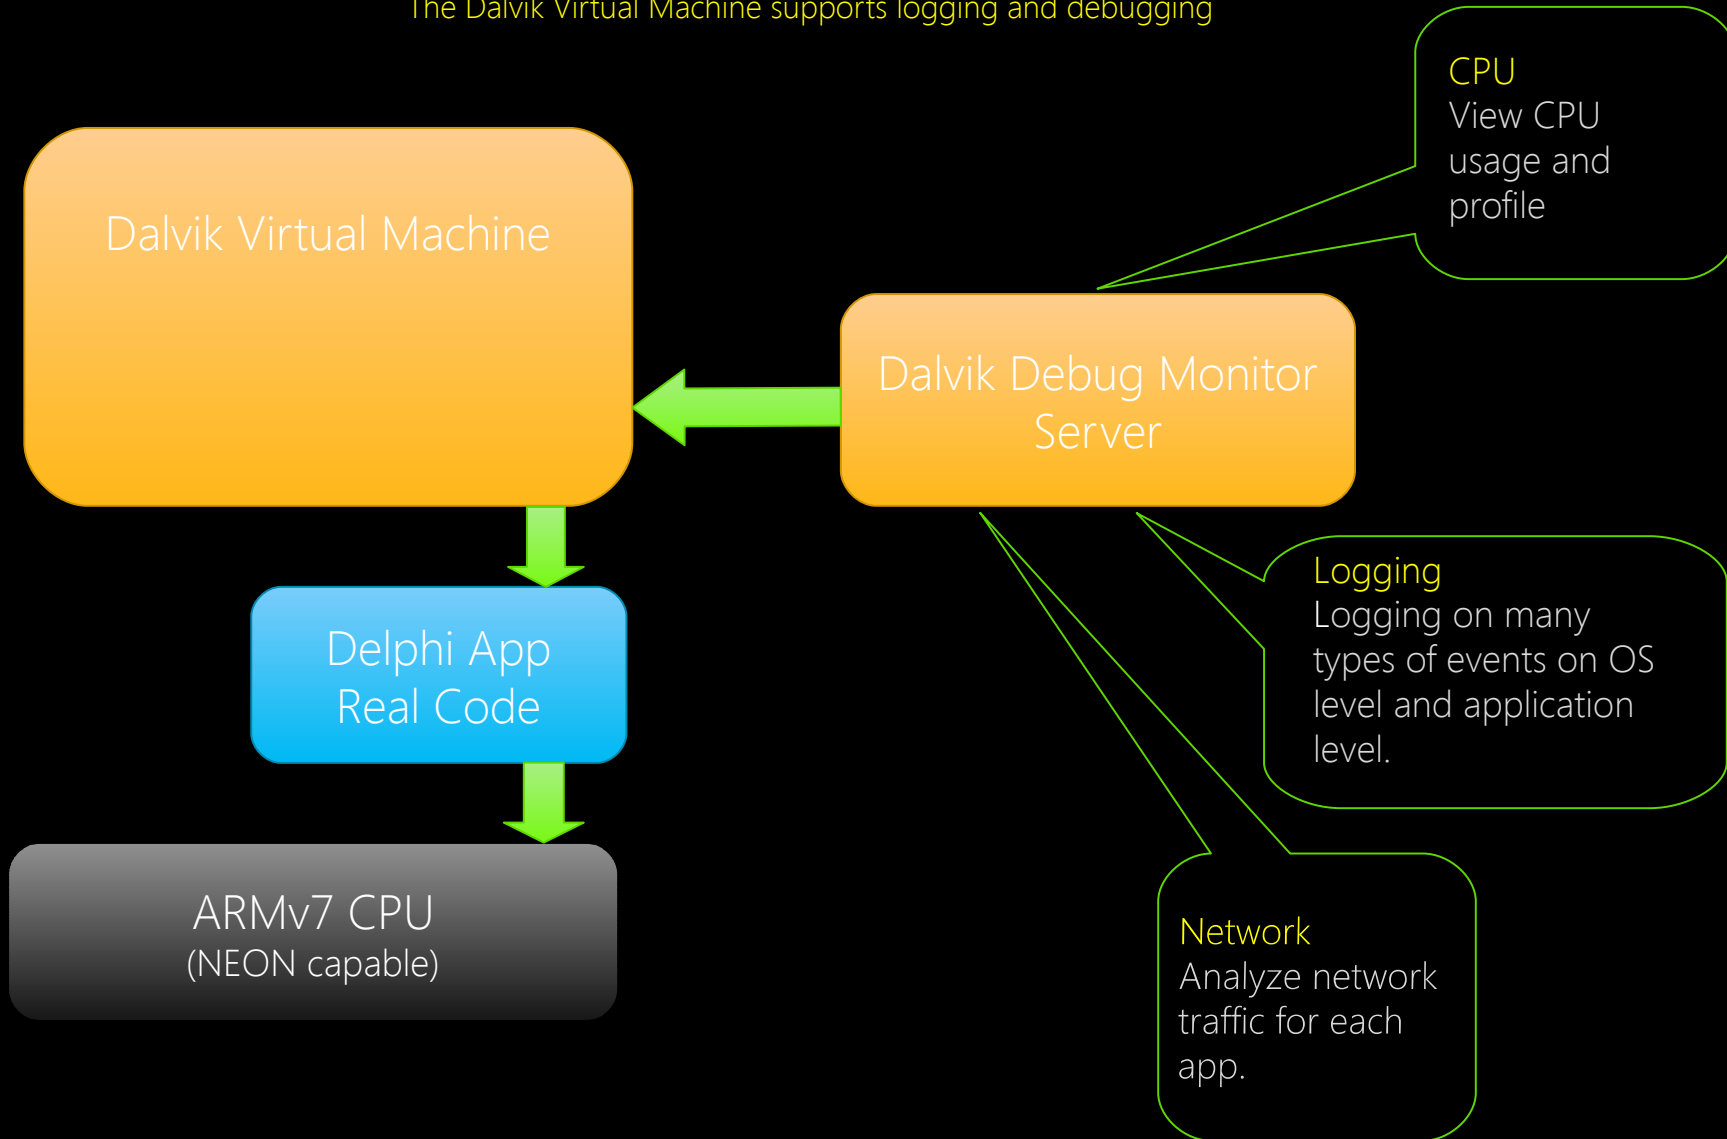

# Debugging

Delphi IDE attaches to GNU Debugger which attaches to native/NDK app

# Debugging

The Dalvik Virtual Machine supports logging and debugging

# Deployment

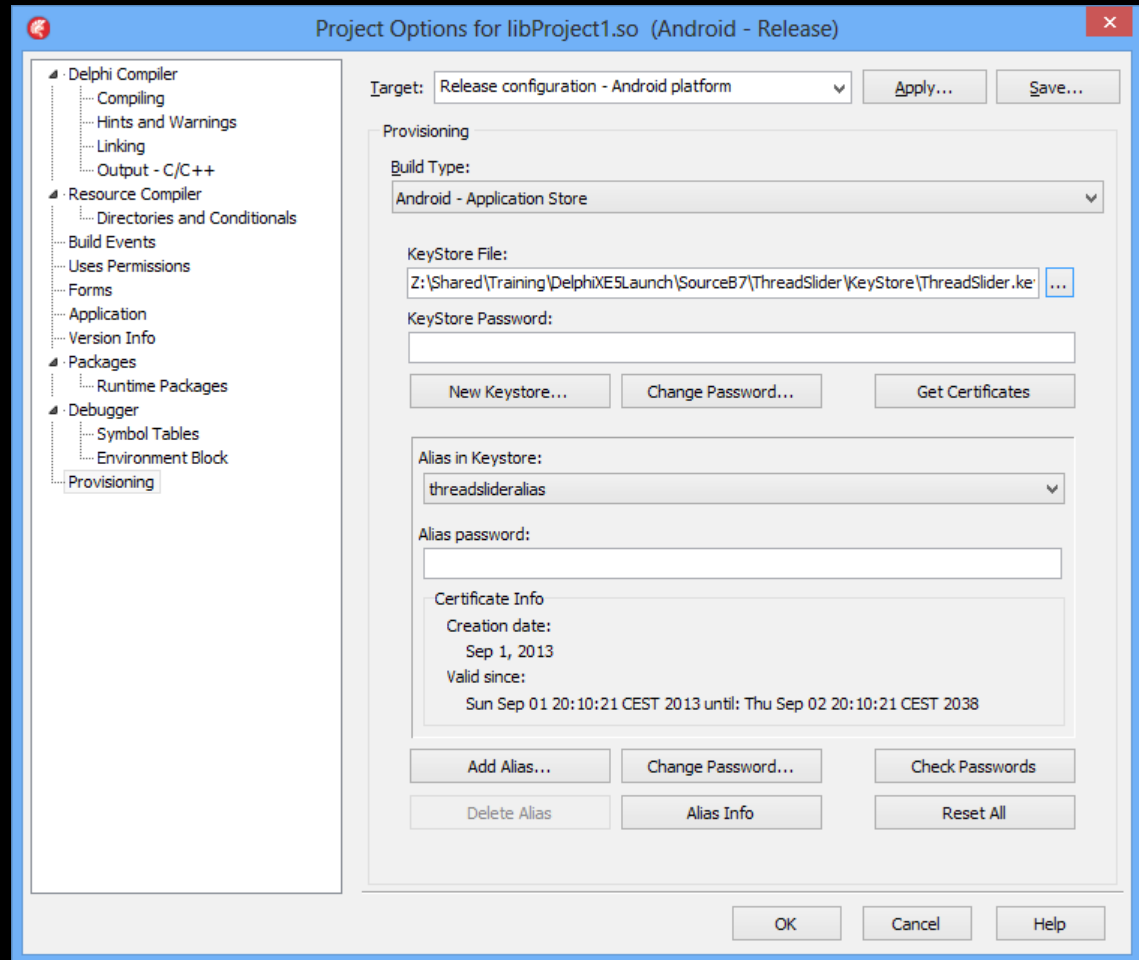

Deep Dive into creating  
Android apps

# Android Deployment Options

- IDE to Device
  - debug
  - release
- App Store (Google Play)
  - with signing / keystore
- self deployed
  - build and share .apk
  - with signing / keystore

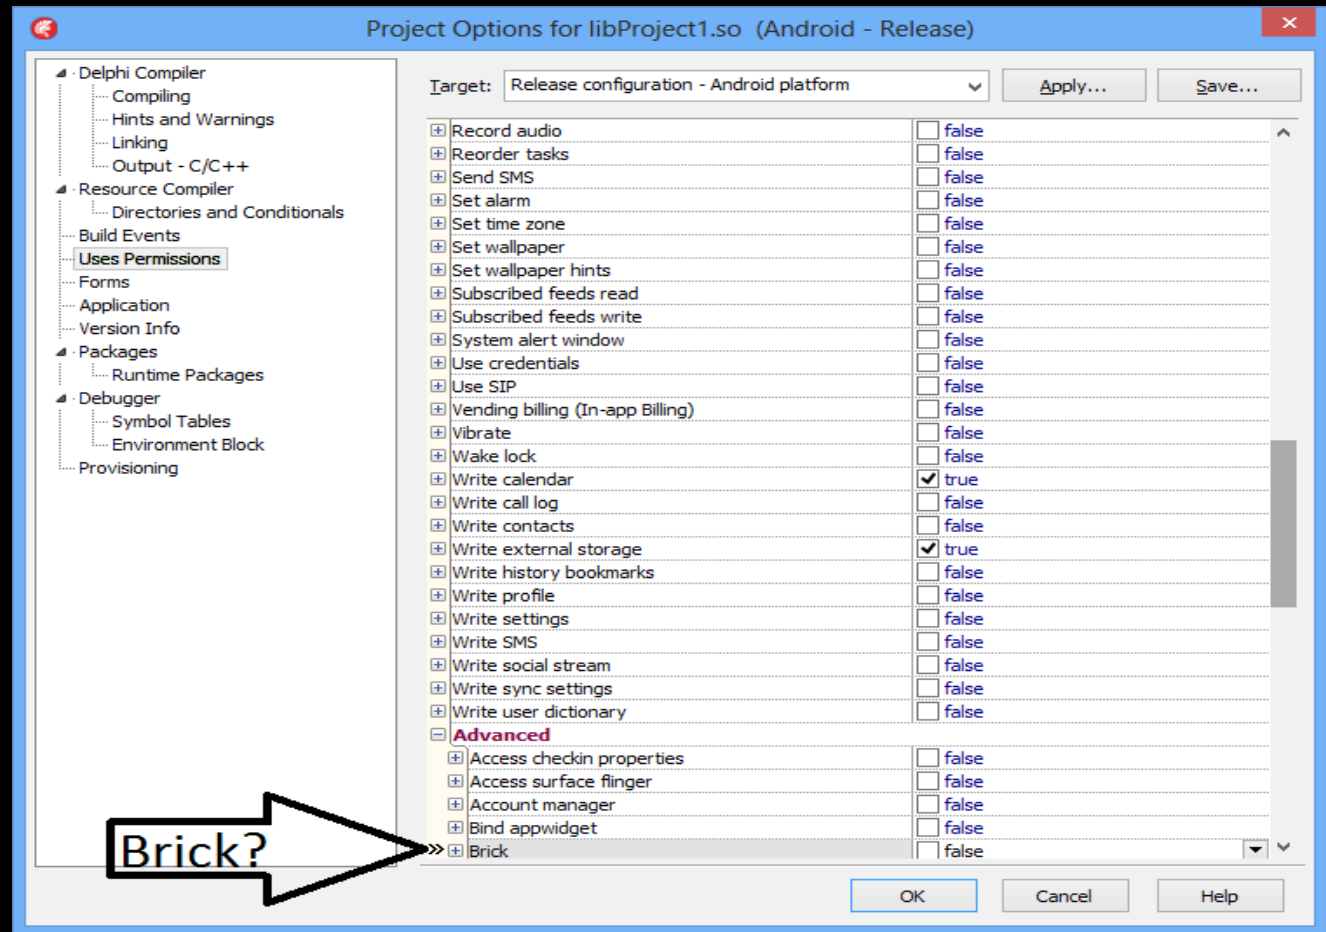

# Keystore

- tied to your App in Google Play
- password.....

# Uses Permissions

- things the app is allowed to do on the device

# Android Target Devices

For the end-user / deployment:

- JellyBean (Android 4.1.x, 4.2.x, 4.3.x)
- Ice Cream Sandwich (Android 4.0.3 and 4.0.4)
- Gingerbread (Android 2.3.3 – 2.3.7)
- **ARMv7 + NEON**

(not supported:  
Honeycomb (Android 3.x)  
Gingerbread emulator)

# Android Development Devices

For development (Debuggable Devices):

- Best : Google Nexus

Not all devices allow debugging without rooting.
